

Synopsys Delivers Verification IP and Test Suite for ARM AMBA 5 CHI Issue B Specification

MOUNTAIN VIEW, Calif., June 19, 2017 /PRNewswire/ -- Synopsys, Inc. (Nasdaq: SNPS) today announced the availability of its Verification IP (VIP) and source code test suite for ARM® AMBA® 5 Coherent Hub Interface (CHI) Issue B. Synopsys VC VIP for AMBA CHI has been widely adopted by SoC leaders for successful verification closure and tape out of coherent subsystems and interconnects. Synopsys VIP for the latest AMBA CHI Issue B specification enables customers and partners to extend the standard architecture for their next-generation coherent designs with new enhancements for increased performance.

"Coherent systems are being adopted rapidly in a wide range of applications to scale performance with multiple processor clusters or I/O coherent accelerators and I/O," said Andy Nightingale, vice president of marketing, systems IP, Systems and Software Group, ARM. "Collaborating on AMBA CHI Issue B VIP with our ecosystem partner, Synopsys, enables SoC teams to verify complex coherency-based designs with ease of use, and to increase productivity and performance for accelerated verification closure."

AMBA CHI Issue B has added new features for atomic operations, cache stashing to improve data locality, new de-allocating and cache maintenance transactions and data check and poisoning to identify data corruption. AMBA CHI Issue B also provides direct data transfer to reduce latency.

Synopsys next-generation VIP provides performance metrics for latency and throughput analysis, a configurable interconnect model, a reference verification platform and system-level checks for protocol, data integrity and cache coherency. The VIP is natively integrated with Synopsys' Verdi® Protocol Analyzer debug solution. Built-in coverage and verification plans are also included to speed up verification coverage closure.

"Our Verification IP and interface IP solutions for ARM's interconnect technology build on more than a decade-long collaboration for development of the latest AMBA protocol," said Vikas Gautam, group director of VIP R&D and corporate applications in the Verification Group at Synopsys. "Our ongoing partnership with ARM continues to enable designers to create their next-generation server and networking devices with the latest AMBA CHI technology."

About Synopsys

Synopsys, Inc. (Nasdaq: SNPS) is the Silicon to Software™ partner for innovative companies developing the electronic products and software applications we rely on every day. As the world's 15th largest software company, Synopsys has a long history of being a global leader in electronic design automation (EDA) and semiconductor IP and is also growing its leadership in software security and quality solutions. Whether you're a system-on-chip (SoC) designer creating advanced semiconductors, or a software developer writing applications that require the highest security and quality, Synopsys has the solutions needed to deliver innovative, high-quality, secure products.
